

HYGIENIC ABSORBING UNDERPAD FOR ANIMALS

Hygienic underpads for pets “SanaPet” are specially designed to provide a comfortable and hygienic solution for pet owners who want to protect their home, car, or pet's living space from accidental spills, urine or feces. These underpads are made up of three layers that work together to prevent moisture from seeping through the pad and reaching the underlying surface.

The top layer of the underpad is made from a non-woven material that is soft and gentle on your pet's paws. This layer is designed to quickly wick away any moisture from the surface, ensuring that your pet stays dry and comfortable at all times. The middle layer of the underpad is made from cellulose fluff, which is highly absorbent and can hold a large volume of liquid. The bottom layer of the underpad is made from polyethylene, which is waterproof and prevents any moisture from passing through the pad and damaging the underlying surface. This layer ensures that your floors, carpets, or car seats stay clean and dry.

These underpads are versatile and can be used in various situations. There are three sizes available, that are perfect for placing in pet cages or carriers when traveling with your pet, providing a comfortable and hygienic surface for them to lie on. They are also suitable for use in the home, where you can place them in designated areas for your pet to urinate on.
